

Applied Math and Statistics seminar  
February 8

Objective:

Create a three-minute presentation on your research,  
based on work for your MS or PhD.

3:05-3:15

Identify the biggest take-aways (i.e. 1-3 points or topics) you want the audience to remember

3:20-3:30

Describe your take-aways in a story - with a beginning, middle and end (that an intelligent undergraduate in any major could understand)

3:35-3:45

Determine why someone should care about your story –  
i.e. describe a scenario that your grandmother could  
relate to

Find a good figure or image to tell your story – it should be simple, not busy, nor contain charged words. It should be notable.
